Vision

B2B-tec is a computer hardware re-seller targeted on small business customers. To simplify the existing order process our subject is to automate the shopping process by implementing a new digital store. For this purpose, the following features are available: Order hardware and support packages directly from our store.

The store accommodates all products and services. Administrative personnel can add and remove products and services.

Registered customers must be able to locate and order products and services through the new digital store. A payment system is used to charge the user with the amount of all products and services placed into the shopping cart. It's possible to modify the shopping cart before checking out.
